

OSG Connection and Integration Guide

The OSG series of smart gloves are designed to provide efficient and stable connection solutions, enabling seamless integration with business environments such as SAP, Oracle, Telnet-based systems, or proprietary WMS/ERP platforms. This guide will help you quickly understand the connection options for OSG smart gloves, allowing you to assist customers in finding the most suitable integration solution to optimize their workflow.

Key Considerations for Finding the Best Integration Solution for Your Customers:

- What type of terminal device will the OSG smart gloves connect to?
- What is the operating system of the terminal device?

Integration Methods by Terminal Devices:

Mobile Devices (e.g., Android, Samsung, iPhone) → **OSG Connector**
 Industrial Handheld Terminals (e.g., OSG PDA) → **OSG Connector**
 Tablet Devices (iPad, Panasonic Toughbook) → **OSG Connector** or **OSG Router**
 Fixed Terminals (Industrial PCs) → **OSG Router**

Integration Methods by Operating Systems:

Android → **OSG Connector**
 iOS → **OSG Connector (iOS)**
 Windows → **OSG Router**
 Linux → **OSG Router**

Frequently Asked Questions (FAQ):

Are there other integration methods available?

If customers require additional connection methods beyond those listed above, we also support the BLE HID protocol. The scanner can be switched to the BLE HID protocol by scanning the configuration barcode.
